

16.317: Microprocessor Systems Design I

Spring 2012

Lecture 19: Key Questions
March 9, 2012

1. Describe the general structure and purpose of a subroutine.

2. Describe the basics of subroutines specific to the 80386.

3. Describe the operation of the CALL instruction.

4. Describe the operation of the RET instruction.

5. **Example:** Assuming $AX = 2$ and $BX = 4$, show the results of the following sequence (Ex. 6.11). Assume the addresses of the first three instructions are DS:0005, DS:0008, and DS:0009, respectively:

```
CALL SUM
RET                ; End main function
SUM PROC NEAR
    MOV  DX, AX
    ADD  DX, BX
    RET
SUM ENDP
```

6. Explain the different instructions used to save state on the stack.
7. Explain the different instructions used to restore state from the stack.

8. **Example:** Assuming the initial state below, what is the resulting stack state of each of the following sequences?

EAX: 12345678H
EBX: 0000000AH
ECX: FF0000FFH
EDX: 00000000H
ESI: 00000008H
EDI: FFFF0000H
EBP: 00000400H
ESP: 00002000H
DS: 2110H
SS: 1000H

- a. PUSH BX
PUSH AX

- b. PUSH EBX
PUSH EAX

- c. PUSH A
