

# **16.216: ECE Application Programming**

Fall 2013

## Lecture 9: Key Questions September 23, 2013

1. In what cases are `for` loops useful? Describe the basic structure of a `for` loop.

2. Describe the operators that allow you to directly modify a variable without writing a full assignment statement.

3. Explain the difference between pre- and post-increment or decrement operators.

4. **Example:** What does the following program print?

```
int n = 5;
printf("n = %d\n", ++n);
printf("Now, n = %d\n", n++);
printf("Finally, n = %d\n", n);
```

5. **Example:** What does each of the following print?

a. 

```
for (i = 5; i < 40; i += 8)
{
    printf("%d ", i);
}
```

b. 

```
for (i = -5; i < -10; i--)
{
    printf("%d ", i);
}
```

c. 

```
for (i = 10; i <= 100; i = i+10)
{
    if (i % 20)
        printf("%d ", i);
}
```

d. 

```
for (i = 5; i < 10; i += i%2)
{
    printf("%d ", i++);
}
```
