

Spring 2015

March 27, 2015

2. Describe how to implement conditional jumps.

3. Describe how to implement simple rotate operations and multi-bit shift/rotate operations.

4. Translate these x86 operations to PIC code. Assume that there are registers defined for each x86 register (e.g. AL, AH, BL, BH, etc.)

- OR AL, BL

- SUB BL, AL

- JNZ label

- JB label (B = below = unsigned less than)

- ROL AL, 5
