

16.317: Microprocessor Systems Design I

Spring 2014

Lecture 5: Key Questions

January 31, 2014

1. **Example:** Compute the linear address for the specified operand in each of the following instructions. The register contents and variables are as follows:
 - $(CS) = 0A00_{16}$
 - $(DS) = 0B00_{16}$
 - $(ESI) = 00000100_{16}$
 - $(EDI) = 00000200_{16}$
 - $(EBX) = 00000300_{16}$
 - a. Destination operand in: `MOV [DI], AX`
 - b. Source operand in: `MOV DI, [SI]`
 - c. Destination operand in: `MOV [BX+0400H], CX`
 - d. Destination operand in: `MOV [DI+0400H], AH`
 - e. Destination operand in: `MOV [BX+DI+0400H], AL`

2. Describe the basic structure of an assembly language statement.
3. What information is typically encoded in an instruction?
4. What is the benefit of having fixed-length instructions? Variable-length instructions?

6. Describe how to determine the number of bytes being accessed from memory in an x86 instruction.

7. Describe the use of the MOV instruction.

8. The example program below shows the initialization of internal registers with immediate data and address information, using MOV instructions. Show the state of all affected registers. Also, explain why AX is used to initialize segment registers.

```
MOV AX,2000H
MOV DS,AX
MOV ES,AX
MOV AX,3000H
MOV SS,AX
MOV AX,0H
MOV BX,AX
MOV CX,0AH
MOV DX,100H
MOV SI,200H
MOV DI,300H
```

- 5

11. Explain the operation of the XCHG instruction. What restrictions are placed on this instruction?

12. Explain the operation of the LEA instruction.

13. Explain the operation of the instructions used for loading a full address pointer (LDS, LSS, LES, LFS, LGS).

14. Show the results of running the following program if DATA_SEG_ADDR = 1200H, assuming the memory contents shown:

DATA_SEG_ADDR:0000

DATA_SEG_ADDR:INIT_TABLE

11	22	
33	44	
55	66	
77	88	
99	AA	
BB	CC	
DD	EE	
FF	16	
03	17	

```
MOV AX, DATA_SEG_ADDR
MOV DS, AX
MOV SI, [INIT_TABLE]
LES DI, [INIT_TABLE+02H]
MOV AX, [INIT_TABLE+06H]
MOV SS, AX
MOV AX, [INIT_TABLE+08H]
MOV BX, [INIT_TABLE+0AH]
MOV CX, [INIT_TABLE+0CH]
MOV DX, [INIT_TABLE+0EH]
```
