EECE.2160: ECE Application Programming Fall 2017

Lecture 20: Key Questions October 25, 2017

1. Explain the use of arrays: what an array represents, how to define an array, and how to access values within the array.

2. Explain how the following example works:

```
int main(void)
{
  int x[8];
  int i;

  // get 8 values into x[]
  for (i=0; i<8; i++)
  {
     printf("Enter test %d:",i+1);
     scanf("%d",&x[i]);
  }
}</pre>
```

3. What happens if we change the loop condition to $i \le 8$? How can we avoid the resulting problem?

4. **Example:** What does the following program print?

```
int main() {
    int arr[10];
    int i;

    printf("First loop:\n");
    for (i = 0; i < 10; i++) {
        arr[i] = i * 2;
        printf("arr[%d] = %d\n", i, arr[i]);
    }

    printf("\nSecond loop:\n");
    for (i = 0; i < 9; i++) {
        arr[i] = arr[i] + arr[i + 1];
        printf("arr[%d] = %d\n", i, arr[i]);
    }
    return 0;
}</pre>
```

5. Describe how to declare, initialize, and access two-dimensional arrays.

6. **Example:** Complete the following program:
