16.216: ECE Application Programming
Fall 2015

Lecture 16: Key Questions
October 13, 2015

1. Write a function that:
    *   Given two integer arguments, x and y, store the quotient and remainder of x / y into locations specified by arguments q and r, respectively.

    *   Uses pointers to swap the values of two double-precision variables
