16.216: ECE Application Programming
Fall 2015

Lecture 15: Key Questions
October 9, 2015

1. **Example:** Write a function to do each of the following:
a. Takes an integer, length, as an argument and prints "length" dashes on a single line

b. Reads a value from the console input and returns 1 if the value is even, 0 if it's odd

c. Takes four double-precision numbers as arguments and returns their average
